

Unroot & Restore Stock Firmware – Complete Guide

Unroot Karna Kya Hai?

Unroot karne ka matlab hai apne rooted Android device se root access (superuser permissions) ko remove karna . Yeh process aam taur par tab kiya jata hai jab aap device ko wapas stock condition mein laana chahte hain, warranty claim karna chahte hain, ya official OTA updates receive karna chahte hain. Bohot saare users root ke security risks, banking apps ke block hone, ya device instability ki wajah se unroot karna chahte hain .

Unroot Karne Ke Tareeqe

1. Magisk ke Zariye Unroot Karna

Agar aapne Magisk se root kiya tha toh unroot karna sab se aasan hai. Magisk Manager app mein "Uninstall" button hota hai. Ismein "Complete Uninstall" option select karein. App automatically kaam karega aur device restart ho jayega . Iske baad root complete remove ho jata hai .

2. SuperSU ke Zariye Unroot Karna

Purani devices par SuperSU use hota tha. SuperSU app mein Settings tab par jayein, "Full Unroot" option select karein aur Continue confirm karein . Phone restart hoga aur root remove ho jayega .

3. Stock Firmware Install Karna (Most Reliable Method)

Yeh sab se universal aur reliable tareeqa hai . Stock firmware install karne se root complete remove ho jata hai chahe aapne kaunsa bhi root method use kiya ho . Iske liye aapko:

- Apne device ka specific stock firmware download karna hota hai
- USB Debugging enable karna hota hai ya Fastboot mode mein jana hota hai
- PC software (jaise Odin for Samsung, Mi Flash Tool for Xiaomi) use karna hota hai

Pixel devices ke liye Google ka "Update & Software Repair" web tool available hai jo process ko guide karta hai . Doosre brands ke liye aapko device-specific guides follow karne hote hain .

4. File Manager ke Zariye (Manual Method)

Root access wali file manager use karke aap manually root files delete kar sakte hain :

- System/bin folder se "su" aur "busybox" delete karein
- System/sbin folder se "su" aur "busybox" delete karein
- System/app folder se "superuser.apk" delete karein
- Device restart karein

Yeh method har device par kaam nahi karta, kyunke kuch devices par files alag locations mein hoti hain .

5. OTA Update ke Zariye

Kabhi kabhi official OTA update install karne se root access automatically break ho jata hai . Lekin yeh method guaranteed nahi hai aur aapko update aane ka wait karna padta hai .

Stock Firmware Install Karne Ka Step-by-Step Process

Stock firmware install karne ke liye aam taur par yeh steps follow kiye jate hain :

1. **Data Backup:** Pehle saara important data backup karein kyunke process mein data wipe ho sakta hai
2. **ADB & Fastboot Setup:** Computer par ADB aur Fastboot tools install karein
3. **USB Drivers Install Karein:** Device ke specific USB drivers install karein
4. **Bootloader Unlock:** Agar bootloader locked hai toh stock firmware flash se pehle unlock hona chahiye
5. **Stock Firmware Download:** Apne device model aur region ke hisaab se stock firmware download karein
6. **Fastboot Mode Mein Jayein:** adb reboot bootloader command use karein
7. **Firmware Flash Karein:** Fastboot commands use karke partitions flash karein:
 - a. fastboot flash boot boot.img
 - b. fastboot flash system system.img
 - c. fastboot flash recovery recovery.img
8. **Device Reboot Karein:** fastboot reboot command use karein

Samsung devices ke liye Odin tool use hota hai aur Xiaomi ke liye Mi Flash Tool .

Important Notes

Factory Reset Root Remove Nahi Karti: Factory reset sirf user data wipe karti hai, root access remove nahi hoti . Agar

aapne system apps delete ki hain toh factory reset unko wapas nahi laati .

Bootloop Ka Risk: Agar stock firmware flash karte waqt koi mistake ho jaye toh device bootloop mein ja sakta hai . Isliye proper guide follow karna zaroori hai.

Warranty: Unroot karne ke baad bhi warranty automatically restore nahi hoti. Yeh manufacturer ki policy par depend karta hai . Kuch manufacturers Knox fuse (Samsung) ya physical e-fuse ko detect karte hain jo root karne par permanently trigger ho jata hai .

Data Loss: Stock firmware flash karne se device ka saara data wipe ho jata hai, isliye backup zaroori hai .

 **Educational Purpose Only:** Yeh guide sirf educational aur learning purposes ke liye hai. Unrooting aur stock firmware installation ka process sirf apne own devices par authorized access ke saath karein. Kisi doosre ke device par bina permission ke modifications karna applicable cyber laws ke under punishable hai .
