

ADB AND FASTBOOT

Fastboot Commands – Unlock, Flash aur Recovery – Complete Notes

◇ Introduction

Fastboot Android ka ek powerful command-line tool hai jo bootloader mode mein low-level operations perform karne ke liye use hota hai. Iski madad se bootloader unlock ya lock kiya ja sakta hai, partitions flash kiye ja sakte hain, custom recovery install ki ja sakti hai aur device ko repair ya update kiya ja sakta hai. Fastboot tab kaam karta hai jab device Fastboot/Bootloader mode mein ho.

◇ **BOOTLOADER UNLOCK AUR LOCK**

Bootloader Unlock

Bootloader unlock karne ke baad hi custom ROM, custom recovery ya custom partitions flash kiye ja sakte hain.

Modern Android Devices

fastboot flashing unlock

Ye command Pixel aur kai naye Android devices par bootloader unlock karne ke liye use hoti hai.

Legacy Devices

fastboot oem unlock

Ye command purane Nexus aur kuch older Android devices ke liye use hoti hai.

Important Notes

Bootloader unlock karne se device ka **factory reset** ho jata hai aur saara user data delete ho jata hai.

Unlock karne se pehle **Developer Options** mein **OEM Unlocking** enable hona zaroori hota hai.

Unlock hone ke baad device ka Verified Boot status aam taur par **Orange State** show karta hai.

Kuch manufacturers, jaise Xiaomi aur kuch OPPO devices, unlock ke liye official unlock tool aur waiting period ki requirement rakhte hain.

Bootloader Lock

Bootloader ko dobara secure karne ke liye:

fastboot flashing lock

Ye command bootloader ko lock kar deti hai. Is process ke dauran bhi device factory reset ho sakta hai.

◇ **BASIC FASTBOOT COMMANDS**

Connected Devices Check Karna

fastboot devices

Ye command Fastboot mode mein connected Android devices ki list display karti hai.

Device Information Dekhna

fastboot getvar all

Ye command device ki detailed information jaise product name, bootloader version, partition details aur slot information display karti hai.

Specific Information Dekhna

Product name:

fastboot getvar product

Bootloader version:

fastboot getvar version-bootloader

Maximum download size:

```
fastboot getvar max-download-size
```

◇ **FLASH COMMANDS**

Fastboot ka use device ke alag-alag partitions mein image files flash karne ke liye kiya jata hai.

Basic Syntax

```
fastboot flash <partition_name> <image_file>
```

Recovery Image Flash

```
fastboot flash recovery recovery.img
```

Ye command custom recovery (jaise TWRP) install karti hai.

Boot Image Flash

```
fastboot flash boot boot.img
```

Ye command boot image (kernel aur ramdisk) flash karti hai.

System Image Flash

```
fastboot flash system system.img
```

Ye command Android system image flash karti hai.

Vendor Image Flash

```
fastboot flash vendor vendor.img
```

Ye command vendor partition ko update karti hai.

Userdata Image Flash

```
fastboot flash userdata userdata.img
```

Ye command userdata partition ko flash karti hai.

DTBO Image Flash

```
fastboot flash dtbo dtbo.img
```

Ye command Device Tree Blob Overlay (DTBO) image flash karti hai.

Vendor Boot Image Flash

```
fastboot flash vendor_boot vendor_boot.img
```

Ye command vendor boot partition ko flash karti hai.

◇ **FLASH ALL IMAGES**

Agar multiple images ek saath flash karni hon to Fastboot automatic commands provide karta hai.

Flash All Partitions

```
fastboot flashall
```

Ye command boot, system, vendor aur supported images ko automatically flash karti hai.

Update ZIP Flash

```
fastboot update update.zip
```

Ye command update package ke through device ko reflash karti hai.

◇ **ERASE COMMANDS**

Erase command kisi partition ka data permanently delete kar deti hai.

Basic Syntax

```
fastboot erase <partition_name>
```

Userdata Partition Erase

```
fastboot erase userdata
```

Ye command factory reset ke barabar hoti hai aur user data delete kar deti hai.

Boot Partition Erase

```
fastboot erase boot
```

Boot partition ko erase karti hai.

System Partition Erase

```
fastboot erase system
```

System partition delete karti hai.

Cache Partition Erase

```
fastboot erase cache
```

Cache partition clear karti hai.

Warning: Erase commands ka use sirf tab karein jab aapko पूरी तरह पता हो कि आप क्या कर रहे हैं, क्योंकि ये data permanently remove कर देती हैं.

◇ **BOOT COMMANDS**

Fastboot किसी image को permanently flash कीये बिना temporary boot भी कर सकता है.

Syntax

```
fastboot boot <image_file>
```

Example

```
fastboot boot twrp.img
```

Ye command TWRP Recovery को temporary boot karti hai. Device restart होने के बाद original recovery वापस आ जाती है.

◇ **REBOOT COMMANDS**

Device को normal Android mode में restart करने के लिये:

```
fastboot reboot
```

Recovery mode में restart करने के लिये:

fastboot reboot recovery

Bootloader mode mein dobara restart karne ke liye:

fastboot reboot-bootloader

Fastboot mode se normal boot process continue karne ke liye:

fastboot continue

◇ **TWRP RECOVERY FLASH – STEP BY STEP**

Step 1: Device ko Bootloader/Fastboot mode mein restart karein.

adb reboot bootloader

Step 2: Confirm karein ki device detect ho rahi hai.

fastboot devices

Step 3: TWRP Recovery flash karein.

fastboot flash recovery twrp.img

Step 4: Recovery mode mein reboot karein.

fastboot reboot recovery

Important Note

Kuch Android devices pehle normal boot ke dauran custom recovery ko overwrite kar dete hain. Aise devices mein flash ke turant baad manually recovery mode mein boot karna zaroori hota hai.

◇ OEM-SPECIFIC COMMANDS

Purane Nexus devices par aam taur par ye command use hoti hai:

```
fastboot oem unlock
```

Modern Android devices (Pixel, OPPO, Realme, etc.) par ye command use hoti hai:

```
fastboot flashing unlock
```

Kuch Xiaomi devices official **Mi Unlock Tool** aur unlock token ka use karte hain.

```
fastboot flash unlocktoken unlocktoken.bin
```

◇ QUICK REFERENCE COMMANDS

Connected devices check karna:

```
fastboot devices
```

Bootloader unlock (Modern):

```
fastboot flashing unlock
```

Bootloader unlock (Legacy):

```
fastboot oem unlock
```

Bootloader lock:

```
fastboot flashing lock
```

Recovery flash:

fastboot flash recovery recovery.img

Boot image flash:

fastboot flash boot boot.img

System image flash:

fastboot flash system system.img

Userdata erase:

fastboot erase userdata

Temporary TWRP boot:

fastboot boot twrp.img

Device reboot:

fastboot reboot

Recovery mode reboot:

fastboot reboot recovery

Device information:

fastboot getvar all

Flash all supported images:

fastboot flashall

Normal boot continue:

fastboot continue

⚠ IMPORTANT NOTES

Ye notes sirf educational aur learning purposes ke liye hain. Bootloader unlock ya flash karne se device ka data erase ho sakta hai aur kuch manufacturers ke devices par warranty affect ho sakti hai.

Fastboot commands sirf un devices par use karein jin par aapko permission ho. Kisi doosre ke device par bina authorization ke flashing ya modification karna applicable cyber laws ke under punishable offense ho sakta hai.
