

# Termux Mein SSH Server Start Karna - Complete Guide

SSH (Secure Shell) server आपको अपने Android phone को remote access करने की facility देता है। Termux में SSH server start करना बहुत simple है, लेकिन कुछ important steps हैं जो follow करने होंगे.

---

## ◇ SSH Server Install Kaise Karein

Sab se pehle आपको OpenSSH package install करना होगा.

Iske liye yeh command use करें:

```
pkg update && pkg upgrade -y  
pkg install openssh -y
```

## ◇ SSH Server Start Kaise Karein

Termux में SSH server start करने के लिए बस yeh command run करें:

```
sshd
```

Agar command run करने के बाद कोई error message नहीं आता, तो इसका matlab है कि server successfully start हो गया है। Server background में चला है और आप Termux use करते रह सकते हैं।

### ◇ Important Things to Remember

**Port Number:** Termux ka SSH server default port 8022 par run karta hai, standard port 22 par nahi. Isliye connect karte waqt port specify karna zaroori hai.

**Server Temporary Hai:** Agar aap Termux app close kar denge toh SSH server bhi stop ho jayega. Dobara connect karne ke liye aapko Termux open karke dubara sshd run karna hoga.

**No Auto-Start:** Termux mein initialization system nahi hai, isliye services manually start karni padti hain. Koi automatic start nahi hoti boot par.

### ◇ SSH Server Stop Kaise Karein

SSH server ko stop karne ke liye yeh command use karein:  
`kill sshd`

### ◇ Connection Test Kaise Karein

SSH server start ho gaya hai ya nahi check karne ke liye, Termux mein hi yeh command run karein:  
`ssh localhost -p 8022`

Is command se aap localhost par connect honge. Agar connection successful hai toh server sahi chal raha hai.

### ◇ Password Set Kaise Karein

SSH ke zariye connect karne ke liye aapko password set karna hoga. Iske liye yeh command use karein:  
`passwd`

Yeh command aapse naya password enter karne ko kahegi. Password set karne ke baad aap SSH client se connect kar sakte hain.

### ◇ Remote Connection Kaise Karein

Kisi doosre device (jaise PC) se Termux SSH server par connect karne ke liye yeh command use karein:  
`ssh -p 8022 username@phone_ip_address`

#### **Example:**

```
ssh -p 8022 u0\_a123@192.168.1.100
```

Yahan username aapka Termux username hai (jo whoami command se pata kar sakte hain), aur phone\_ip\_address aapke phone ki IP address hai jo ifconfig ya ip addr se pata kar sakte hain.

### ◇ File Transfer Kaise Karein (SCP)

SSH server chalne ke baad aap SCP ka use karke files transfer kar sakte hain. Dosre device (jaise PC) se Termux mein file transfer karne ke liye:

**PC se Termux mein file copy karna:**

```
scp -P 8022 local_file.txt  
username@phone_ip:/destination/path/
```

### **Example:**

```
scp -P 8022 ~/Documents/file.txt  
u0\_a123@192.168.1.100:~/storage/downloads/
```

### **Termux se PC mein file copy karna:**

```
scp username\_termux@192.168.1.100:~/file.txt  
/local/destination/
```

#### ◇ Advanced: Automatic Start Setup

Agar aap chahte hain ke Termux open hote hi SSH server automatically start ho jaye, toh aap ek startup script bana sakte hain:

```
mkdir -p ~/.termux/boot  
echo -e '#!/data/data/com.termux/files/usr/bin/env  
bash\n\nsshd' > ~/.termux/boot/start-sshd  
chmod +x ~/.termux/boot/start-sshd
```

Is script se Termux launch hote hi SSH server auto-start ho jayega.

### Important Legal Note

Yeh guide sirf educational aur learning purposes ke liye hai. SSH server ka istemal sirf apne own devices par authorized access ke liye karein. Kisi doosre ke device par bina permission ke remote access karna applicable cyber laws ke under punishable hai.
