

PYTHON REGEX BASICS NOTES

Basics of Regular Expressions with Real Life Examples

Learn Pattern Matching using Python Regex

Introduction to Regex

Regex ka matlab Regular Expressions hota ha.
Ye text mein patterns find karne ke liye use hota ha.
Python regex ko handle karne ke liye re module provide karta ha.
Regex searching aur matching ko easy banata ha.
Developers emails aur phone numbers validate karte hain.
Regex large text data ko quickly analyze karta ha.
Ye web development aur cybersecurity mein bohat useful ha.
Beginners ko regex basics samajhna chahiye.
Regex automation aur validation mein help karta ha.
Python regex powerful aur flexible feature ha.

Real Life Example: Jaise police specific number plate search karti ha waise hi regex text patterns search karta ha.

Importing re Module

Python mein regex use karne ke liye re module import karna hota ha.
Import re likh kar regex features access kiye jate hain.
Ye module pattern matching functions provide karta ha.
Developers searching aur validation ke liye is module ko use karte hain.
Re module beginners ke liye easy hota ha.
Python ka built in module hone ki wajah se installation ki zaroorat nahi hoti.
Regex operations isi module ke through perform hoti hain.
Ye programming ko more powerful banata ha.
Re module text processing mein important role play karta ha.
Har regex project mein ye pehla step hota ha.

Real Life Example: Jaise toolbox ke bina tools use nahi kar sakte waise hi regex ke liye re module import karna zaroori ha.

Searching Patterns

Regex patterns ko search karne ke liye search() function use hota ha.

Ye text mein matching pattern ko find karta ha.

Developers important words aur data search karte hain.

Search function pehla match return karta ha.

Regex searching fast aur accurate hoti ha.

Python searching ko simple syntax ke through handle karta ha.

Large text files mein search bohat useful hoti ha.

Cybersecurity logs analysis mein regex search use hoti ha.

Beginners ko search function practice karni chahiye.

Pattern searching regex ka important feature ha.

Real Life Example: Jaise Google search results find karta ha waise hi regex patterns search karta ha.

Matching Patterns

Regex matching text ko specific rules ke according check karta ha.

Match() function starting text ko analyze karta ha.

Developers input validation ke liye matching use karte hain.

Regex matching emails aur passwords verify karta ha.

Python matching ko bohat easy banata ha.

Ye forms aur authentication systems mein common ha.

Matching errors aur invalid data ko detect karti ha.

Regex validation modern applications mein bohat important ha.

Beginners ko matching aur searching ka difference samajhna chahiye.

Pattern matching text processing ka useful concept ha.

Real Life Example: Jaise ticket checker valid ticket verify karta ha waise hi regex matching valid data check karta ha.

Special Characters in Regex

Regex mein special characters unique meanings rakhte hain.
Dot symbol kisi bhi character ko represent karta ha.
Star symbol multiple repetitions ko show karta ha.
Caret symbol line ke start ko represent karta ha.
Dollar symbol line ke end ko show karta ha.
Special characters patterns ko flexible banate hain.
Developers advanced searching ke liye in symbols ko use karte hain.
Regex syntax beginners ko practice se samajh aati ha.
Ye pattern matching ko powerful banata ha.
Special characters regex ka important part hain.

Real Life Example: Jaise traffic signs different meanings show karte hain waise hi regex special symbols bhi specific meanings rakhte hain.

Benefits of Regex

Regex text processing ko fast aur efficient banata ha.
Developers large data ko quickly analyze kar sakte hain.
Regex automation aur validation dono mein helpful ha.
Python regex beginners aur professionals dono use karte hain.
Ye coding ko smarter aur shorter banata ha.
Regex manual checking ka effort reduce karta ha.
Cybersecurity aur web development mein regex common ha.
Pattern matching real world applications mein bohat useful ha.
Regex data cleaning aur filtering mein help karta ha.
Har programmer ko regex basics seekhne chahiye.

Real Life Example: Jaise washing machine automatically kapray filter karti ha waise hi regex text ko filter karta ha.
