

PYTHON API REQUESTS NOTES

Basics of API Requests with Real Life Examples

Learn API Communication using Python

Introduction to API Requests

API ka matlab Application Programming Interface hota ha.
API different applications ko aapas mein communicate karne mein help karti ha.
Python API requests ke through online data access karta ha.
Developers APIs se weather aur social media data lete hain.
API requests automation aur web development mein bohat useful hain.
Python requests library API communication ko easy banati ha.
APIs modern internet applications ka important part hain.
Beginners ko API basics samajhna chahiye.
API requests real time information provide karti hain.
Python API integration ke liye popular language ha.

Real Life Example: Jaise waiter customer ka order kitchen tak pohanchata ha waise hi API applications ke darmiyan data transfer karti ha.

Requests Library

Python mein API requests bhejne ke liye requests library use hoti ha.
Ye HTTP communication ko easy banati ha.
Developers GET aur POST requests perform karte hain.
Requests library beginners ke liye simple hoti ha.
Python internet se data access karne mein help karta ha.
Library install karne ke liye pip install requests use hota ha.
Requests automation projects mein common ha.
Ye APIs ke sath communication ko fast banati ha.
Developers websites aur services ko access karte hain.
Requests library Python ki famous libraries mein se ek ha.

Real Life Example: Jaise courier service parcel bhejti ha waise hi requests library data bhejti aur leti ha.

GET Request

GET request API se data lene ke liye use hoti ha.
Python requests.get() method provide karta ha.
Developers APIs se live information hasil karte hain.
GET requests weather aur news apps mein common hain.
Server response ke through data return karta ha.
Python GET request ko easy syntax ke sath handle karta ha.
Beginners ko GET request sabse pehle seekhni chahiye.
API communication ka ye basic method ha.
GET requests mostly read-only information ke liye use hoti hain.
Ye web development ka important concept ha.

Real Life Example: Google search karna aur results hasil karna GET request ki tarah hota ha.

POST Request

POST request server ko data bhejne ke liye use hoti ha.
Python requests.post() method use karta ha.
Developers forms aur login systems mein POST use karte hain.
POST requests new data create kar sakti hain.
Ye secure communication mein helpful hoti ha.
APIs POST request ke through user information receive karti hain.
Python POST requests ko simple bana deta ha.
Web applications mein POST requests bohat common hain.
Beginners ko GET aur POST ka difference samajhna chahiye.
POST request API communication ka important part ha.

Real Life Example: Online registration form submit karna POST request jaisa hota ha.

Working with JSON Data

JSON ek lightweight data format ha jo APIs mein use hota ha.

Python `response.json()` method provide karta ha.

Developers structured data ko easily access karte hain.

JSON dictionaries ki tarah data organize karta ha.

Weather aur social media apps JSON use karti hain.

Python JSON parsing ko simple banata ha.

Beginners ko JSON structure seekhna chahiye.

API responses mostly JSON format mein hoti hain.

JSON readable aur efficient format ha.

Modern APIs mein JSON ka bohat important role ha.

Real Life Example: Jaise school register mein student data organized hota ha waise hi JSON data organized hota ha.

Status Codes

Status codes server response ko explain karte hain.

200 success response ko show karta ha.

404 ka matlab page nahi mila hota ha.

500 server error ko represent karta ha.

Developers debugging ke liye status codes check karte hain.

Python `response.status_code` se codes access karta ha.

Status codes communication problems identify karne mein help karte hain.

Beginners ko common codes yaad hone chahiye.

Ye API requests ka important feature ha.

Status codes internet communication ko samajhne mein helpful hain.

Real Life Example: Jaise parcel tracking order ka status show karti ha waise hi status codes request ka result show karte hain.
