

Introduction to Python Programming

Prepared by: Syed Ghous

1. Python Kya Hai?

Python ek computer programming language hai. Ye bilkul aasaan English jaisi hai, isliye ise seekhna bahut simple hai. Aap ise aise samajh sakte hain ke ye ek aisa translator hai jo hamari baat computer ko samjhata hai.

2. Python Kyun Seekhein?

- Ye bohot aasaan hai.
- Isse aap games, website, aur AI bana sakte hain.
- Bade bade log aur companies (jaise YouTube/NASA) ise use karte hain.

3. Pehla Program: Print Command

Agar humne computer ko bolna ho ke "Screen par ye likho", to hum `print()` ka use karte hain.

```
print("Hello, Python!")
```

Isme `print` ka matlab hai "screen par dikhao", aur jo humne quotes (" ") mein likha, wahi screen par aa jayega.

4. Variables: Data Ka Dibba

Variable ek chota sa dibba hai jisme hum apni information save karte hain.

```
naam = "Syed Ghous"  
umar = 20  
print(naam)  
print(umar)
```

Yahan `naam` aur `umar` hamare dibbe hain jinme humne values store ki hain.

5. Yaad Rakhne Wali Baatein

- Python chota-bada (Case-sensitive) farq karti hai.
- Text likhne ke liye hamesha quotes (" ") lagayein.
- Numbers ke liye quotes ki zaroorat nahi hoti.

6. Summary (Conclusion)

Python programming mushkil nahi hai, ye sirf instructions dene ka naam hai. Humne seekha ke print() se output kaise lete hain aur variable mein cheezon ko save kaise karte hain. Bas practice jari rakhein!
